# GILL HURDLES CLEANING AND STORAGE

## General Cleaning and Storage:

Before storing for the off season, the hurdles should be cleaned and stacked properly according to the following instructions.

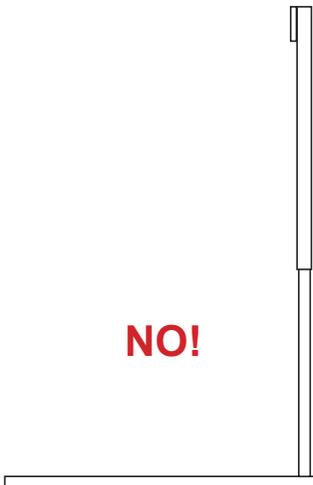

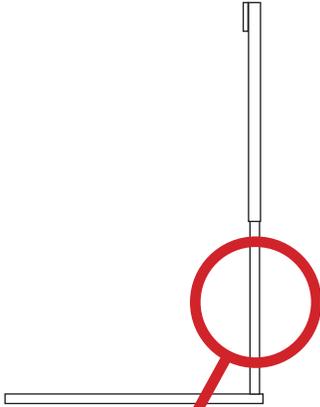

*If the hurdles are in an especially dirty environment, they may need to be cleaned periodically during the season to maintain proper working condition.*

1. Raise the hurdle to the highest (42") position.
2. Wipe down the uprights with a soft cloth to remove any debris that might have gathered there.
3. Spray the clean uprights with a dry lubricant. Raise and lower the gatetubes 2 times to ensure the lubricant has been spread evenly over the upright.

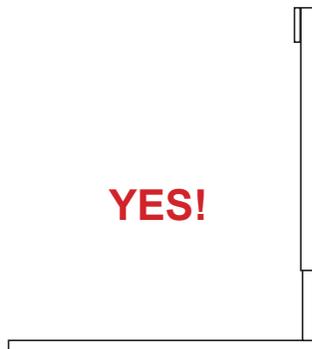

*Only use a dry lubricant such as TDL - The Dry Lube or similar Teflon based dry lubricant which can be found at most hardware stores. **DO NOT USE WD40 or similar products!** Petroleum based lubricants will cause debris to build up on the upright and increase binding.*

4. Secure the gatetubes in the lowest (30") position for storage.

*Leaving the gatetubes in the down position will protect the uprights from the environment during the off season. This is especially important in areas with high air pollution and/or strong winds.*

**NO!**

**YES!**
