

The VersaCom Box provides a junction for electricity and cable hookups. This box can be put in virtually any location around performance areas of varying surfaces. The open bottom of the VersaCom Box provides adequate drainage and conduit entry, while the hand hole in the cover allows easy access. The main box structure is made of 1/4" thick folded aluminum. The lid and cover are constructed out of 1/4" aluminum plates for maximum support and durability. A tether keeps the cover attached to the box. Factory installed infill retention brushes collect and keep turf infill out of the box.

Full Size Dimensions: 18" L x 15 1/4" W x 14" D with 1/4" wall thickness.
