

730 Sand Pit Perimeter Padding

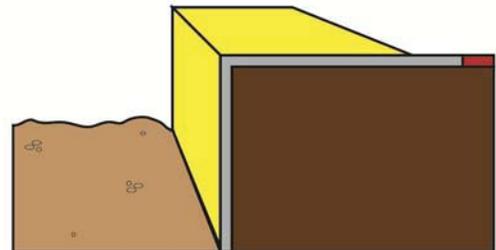

3 Pads joined together. Pads form a continuous line of protection for athletes.

Gill Sand Pit Perimeter Padding is constructed of 1.5" polyethylene foam encased 20oz outdoor formulated polyester coated vinyl. Pads are standard 36" long by 6" extending in either direction. Pads have hook-and-loop connections to join multiple pads together for seamless protection.

This pad is designed to sit on the ledge of a long/triple jump sand pit to protect the jumpers from hitting the metal or concrete edge.

To use, set pads on edge of sand pit. If the depth of the sand is high enough to interfere with the pad setting level on the top edge, pull the sand away from the edge and insert the pad. Then push sand back against the pad. This will ensure pad is secure during competition.

End view of pad, shown tucked into sand.

For longest lasting quality, store pads indoors between uses. This lightweight product is designed to store flat when not in use. Do not store under compression, especially in hot conditions as pads may permanently deform.

Vinyl may be punctured by track spikes during use; interior foam is closed cell and will not absorb water or degrade from water exposure.

This pad is designed to reduce the risk of injury during use. However, any activity involving motion and severe impacts may result in serious injuries, including but not limited to paralysis or death.

WARNING: This product can expose you to Urethane, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.p65warnings.ca.gov.
